Emmanuel Nsikan-David

Fullstack Web Developer(Frontend Heavy)

Email Github Portfolio linkedin

SUMMARY

A computer science student with three years of experience in Fullstack Web Development, I specialize in designing and building user-friendly web applications that work well and look great.
My additional experience in the field of UI design helps me create interfaces that not only look great but are also functional, easy to develop, and intuitive for users.

TECHNOLOGY STACK

HTML, CSS, JavaScript, TypeScript React.JS, NEXT.JS, Node.JS, Express.JS, MongoDB

EXPERIENCE (PROJECTS)

Zeni : Track Expenses with Natural Language

Live Site : https://zeni-psi.vercel.app
Github URL : https://github.com/Daviddix/zeni

Roles and Responsibilities:

- Built an AI agent with Google ADK to parse natural language and receipts for automated expense categorization.
- Architected a full-stack Next.js/Node.js app with Firebase and deployed the AI backend on Google Cloud Run.
- Engineered natural language budgeting logic to dynamically set and track category spending limits.
- Created interactive charts and real-time AI analytics to transform raw transaction data into spending insights.

SOL : Offline AI Study Assistant

Github URL : https://github.com/Daviddix/SOL

Roles and Responsibilities

- Engineered an offline-first RAG architecture using Next.js, Express, and LanceDB for local semantic search and quiz generation.
- Implemented intelligent document chunking and vector retrieval to maximize Gemma 4’s accuracy on large textbooks.

- Configured LM Studio for local Gemma 4 inference, ensuring private, cost-free, and fast offline LLM access.

Mobile Benchmarks : Discover Games That Run Perfectly on Your Phone

Live Site : https://mobile-benchmarks.vercel.app
Github URL : https://github.com/Daviddix/mobile-benchmarks

Roles and Responsibilities:

- Developed a React.js web app matching smartphone specs with game requirements to showcase compatible titles.
- Built a game recommendation engine using Cosine Similarity on vector embeddings for tailored user suggestions.
- Integrated Cloudflare R2 for offloaded media storage, accelerating load times and cutting server bandwidth.

EDUCATION

Computer Science
-Federal University of Technology Minna, Niger state, Nigeria : 2024 - 2028

VOLUNTEERING

GDGoC (Google Developer Group on Campus FUTMINNA)
- Core Technical Team Member : 2025 - Present
- Facilitated a 2-day "Build with AI" workshop for ~50 students on deploying projects with Google AI Studio and Antigravity.
- Mentored cross-functional student teams from ideation to deployment for successful launches of AI web applications.
- Simplified complex AI principles using real-world examples to accelerate learning for non-technical participants.

TECHNICAL SKILLS

Git & Github , AI Integration , Retrieval-Augmented Generation (RAG), Vector Embeddings & Semantic Search, Local LLM Inference, UI/UX Design

ACHIEVEMENTS

Bless Network Hackathon - 3rd Place Recognition
-Built and deployed Ruta; an AI based project utilizing the bless network protocol
